

Methodology of Calculation of Sale and Repurchase Price of Mutual Fund Unit

Methodology of calculating the sale price:

The price or NAV an investor is charged while investing in an open-ended scheme is called sale / subscription price. Pursuant to clause 10.4.1.a of the SEBI Master circular for Mutual Funds dated June 27, 2024, no entry load will be charged by the Scheme to the investors. Therefore, Sale / Subscription price = Applicable NAV

Methodology of calculating the repurchase price

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the investors. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price. Therefore, Repurchase / Redemption Price = Applicable NAV \times (1 – Exit Load, if any) For example, If the Applicable NAV of the Scheme is Rs. 10 and the Exit Load applicable at the time of investment is 1% if redeemed before completion of 1 year from the date of allotment of units and the investor redeems units before completion of 1 year, then the repurchase/redemption price will be: = Rs. $10 \times (1 - 0.01) = \text{Rs. } 9.90$
